

I am delighted to know that the National Board of Examinations in Medical Sciences (NBEMS) is launching an online training programme on Artificial Intelligence in Healthcare for doctors across India.

Artificial Intelligence is emerging as a powerful enabler in healthcare, with applications ranging from improved diagnostic accuracy and clinical decision support to enhanced efficiency in procedures and research. When appropriately applied, AI can complement clinical expertise and contribute to better patient care. At the same time, it is vital that medical professionals are well informed about the ethical considerations, limitations, and responsibilities associated with the use of such technologies.

AIG Hospitals, Hyderabad, has been at the forefront of adopting and advancing Artificial Intelligence particularly in the areas of gastroenterology, endoscopy, hepatology, oncology, and clinical decision support. AIG has actively collaborated with global technology partners and academic institutions to develop and validate AI tools for real-time image analysis, disease prediction, and workflow optimization.

NBEMS deserves appreciation for taking a proactive role in preparing the medical fraternity to engage meaningfully with these advancements.

I extend my congratulations to NBEMS for this important academic initiative and wish the programme great success. I am confident that it will benefit doctors across specialties and play a constructive role in shaping the future of healthcare delivery in our country.

Warm regards,

Dr D Nageshwar Reddy
