TRAUMA CARE THEORY PAPER

Time

: 3 hours

Max. Marks: 100

o nour

Attempt all questions in order. Each question carries 10 marks.

Write short notes on:

Clinical diagnosis and relevant investigations in a 30-year-old man presented with a closed fracture of both bones leg with an impending compartment syndrome. Discuss the management in detail.	5+5
Describe the determinants of 'electric shock injuries' (ESI). Discuss the management of a high intensity ESI of the right dominant forearm in a 25-year-old farm worker.	5+5
Recommendations for preservation and transportation of an amputated part for possible reimplantation. Describe reimplantation of the severed hand following a sword cut at the wrist level.	4+6
Describe the evaluation and the management of a patient with stab injury to the left side chest in 5 th intercostal space in anterior axillary line.	4+6
 a) Supracondylar fracture of humerus. b) Diagnose and management of pink pulseless hand in a 6-year-old girl with supracondylar fracture humerus. c) Diagnosis of Volkman's ischaemic contracture. 	3+4+3
a) Peripheral nerve injuries & its types.b) Diagnosis of Erb's palsy.c) Management of Brachial plexus injury.	4+3+3
 a) Define amputation. b) Enumerate the indications for amputation. c) Describe any one objective method to decide amputation/limb salvage after traumatic limb injury. 	2+4+4
a) Tension pneumothorax.b) Massive Haemothorax.	5+5
Classification of pelvic fractures and emergency management of a hemodynamically unstable patient presented with pelvic fractures.	5+5
a) REBOA.b) Principles of vascular repair in a patient with peripheral vascular injury.	5+5
