DNB Anaesthesiology Paper3

Question Number : 5

A 22-year-old female pregnant patient presented to the labour room in emergency with abdominal pain. She was diagnosed with PIH and was receiving treatment in her follow-up in the ANC clinic. On examination, the obstetrician diagnosed her as having fetal distress and planned for an emergency cesarean section. Discuss the perioperative plan for the patient, including assessment, anaesthesia and analgesia. [3+4+3]

Question Number : 6

A 35-year-old male is diagnosed with carcinoma lung. Her PFT reveals FEV1 of 78% of predicted with FVC of 65% of predicted. He has been a chronic smoker for the last 20 years. He is posted for VATS lobectomy. How will you assess and optimise the patient? Discuss the anaesthetic plan. [(3+3)+4]
